1	Introduction	1
1.1	Related Work	2
1.2	Outline	4
2	Mathematical Preliminaries	7
2.1	Notation	7
2.2	Convexity	8
2.2.1	Convex Sets	9
2.2.2	Convex Functions	9
2.3	Mathematical Optimization	9
2.3.1	Convex Optimization Problems	11
2.3.2	Duality Theory	11
2.3.3	Slater's Condition	11
2.3.4	Karush-Kuhn-Tucker Conditions	12
2.3.5	Linear Programs and Integer Linear Programs	13
2.3.6	Duality Theorem for Linear Programs	13
2.3.7	Solution Space of Linear Programs	14
3	Orthogonal Resource Allocation	15
3.1	Problem Formulation	15
3.1.1	Problem Domain	16
3.1.2	Problems with Linear Objective	16
3.1.3	Problems with Min-Max Objective	17
3.2	Exemplary Problems	18
3.2.1	Weighted Sum Rate Maximization	18
3.2.2	Weighted Sum Power Minimization	21
3.2.3	Fairness-Constrained Rate Maximization	23
3.2.4	Heterogeneous User Rate Maximization	27
4	Resource Allocation for Discrete Rate Functions	31
4.1	Integer Linear Program Formulation	33
4.2	Resource Allocation as a Multidimensional Multiple-Choice Knapsack Problem	36
4.3	Dual Problem for Discrete Rate Functions	38

4.4	Dual Methods and Rounding Methods	40
4.5	Feasibility and Performance	48
4.6	Integrality Gap Estimation for Discrete Rate Functions	52
4.7	Problem-Specific Analysis for Discrete Rate Functions	57
4.7.1	Weighted Sum Rate Maximization with Global Power Budget	57
4.7.2	Weighted Sum Rate Maximization with Individual Power Budgets	60
4.7.3	Weighted Sum Power Minimization with Global Rate Demand	62
4.7.4	Weighted Sum Power Minimization with Individual Rate Demands	63
4.7.5	Fairness-Constrained Rate Maximization	65
4.7.6	Heterogeneous Rate Maximization	67
4.8	Asymptotic Performance for Discrete Rate Functions	70
4.8.1	Asymptotic Performance of Weighted Sum Rate Maximization for Discrete Rate Functions	71
4.8.2	Asymptotic Performance of Weighted Sum Power Minimization for Discrete Rate Functions	72
4.8.3	Asymptotic Performance of Fairness-Constrained Rate Maximization and Heterogeneous Rate Maximization for Discrete Rate Functions	73
5	Resource Allocation for Concave Rate Functions	77
5.1	Mixed Integer-Continuous Formulation	79
5.2	Dual Problem for Concave Rate Functions	85
5.3	Mixed Integer-Continuous Rounding Methods	88
5.4	Integrality Gap Estimation for Concave Rate Functions	91
5.5	Problem-Specific Analysis for Concave Rate Functions	93
5.5.1	Weighted Sum Rate Maximization with Global Power Budget	93
5.5.2	Weighted Sum Rate Maximization with Individual Power Budgets	97
5.5.3	Weighted Sum Power Minimization with Global Rate Demand	102
5.5.4	Weighted Sum Power Minimization with Individual Rate Demands	107
5.5.5	Fairness-Constrained Rate Maximization	110
5.5.6	Heterogeneous Rate Maximization	111
5.6	Asymptotic Performance for Concave Rate Functions	113
6	Capacity-Achieving Weighted Subcarrier Allocations	119
6.1	System Model and Problem Formulation	121
6.2	Optimality Analysis of Allocations	124
6.3	Optimality Polyhedron	127
6.4	Weighted Subcarrier Allocations and their Properties	132

6.5	Line Search Maximization with Unknown Denominator	135
6.6	Neighboring Weighted Subcarrier Allocations	141
6.7	Capacity-Achieving Waterlevel Algorithms	144
6.8	Simulation Results and Conclusion	146
7	Conclusions	149
7.1	Summary	149
7.2	Contributions and Discussion	150
7.3	Future Research Directions	155
	List of Acronyms	159
	List of Symbols and Notation	161
	Bibliography	169
	Index	177
